```
V e.p.i y sea vo∈V.
                        Tu = \langle u, v_o \rangle

a) Lineal: Sean u, v \in V y a, b \in \mathbb{R}

T(au+bv) = \langle au+bv, v_o \rangle = \langle au, v_o \rangle + \langle bv, v_o \rangle
                                                                           = a(u,v_0) + b(v,v_0)
                                           = aTu + bTv

<u>Acotodo</u>: ||Tu||<sub>R</sub> = | (u, v.)| = |||u||<sub>V</sub> || Vo ||<sub>V</sub> Cos B|
                                b) ||T || = sup ||Tu||
                                Ya vimos que ||Tu|| = ||Volly-||U||<sub>V</sub>
                             Jugo, sup ||Tu|| = sup ||Vo||V||U||V
                  = ||V_0||<sub>V</sub>

Por otro bodo, sup ||Tu|| = ||Tv|| \|\forall \veV: ||V||<sub>V</sub>=1.

\begin{array}{ll}
\text{En particular para } \frac{V_o}{\|V_o\|_{V}} \cdot \text{Luego, } \sup \|Tu\| \stackrel{>}{=} \|T(V_o)\| \\
\|V_o\|_{V} \stackrel{<}{=} \sup \|T_u\| \stackrel{\leq}{=} \|V_o\|_{V} \\
\|u\| \stackrel{=}{=} \|V_o\|_{V} \\
\| = \|V_o\|_{V} \\
= \frac{1}{\|V_o\|} = \|V_o\| \\
\| V_o\| = \|V_o\| \\
\| V_o\| \end{aligned}

             11/6/fy < 540 ||Tu|| < 11/6/ly
⇒ 1111=11611v.
